## An Index of Electronic Equipment Operability

### DATA STORE

Sara J. Munger  
Robert W. Smith  
Dan Payne

American Institute for Research  
Pittsburgh, Pennsylvania

31 January 1962

Contract No. DA-36-039-SC-80555  
Signal Corps Technical Requirements EWD

Copyright © 1962

by the American Institute for Research

The United States Government and its officers, agents, and employees, acting within the scope of their duties, may reproduce, publish, and use this material in whole or in part for governmental purposes without payment of royalties thereon or therefor.

The publication or republication by the Government either separately or in public document, of any material in which copyright is subsisting shall not be taken to cause any abridgment or annulment of the copyright or to authorize any use of appropriation of such copyright material without the consent of the copyright proprietor.

The Data Store contains the time and operator reliability data to be used with the Index of Electronic Equipment Operability. The Data Store is one of five related documents. In addition to the data, the Instruction Manual and Evaluation Booklet are required for conducting an evaluation. The Sample Equipment Evaluations report contains detailed reports of the evaluation of four equipments, including recommendations. The Report of Development constitutes the final technical report, and describes the development of the Index.

# CIRCULAR SCALES

BASE TIME = .50

Time added Reliability

1.03	.9996	1. Scale diameter
0	.9997	a. 1"
.03	.9993	b. 1.6-1.75"
		c. 2.75"
1.50	.9966	2. Scale style
1.50	.9967	a. Quantitative reading (Determine a specific value.)
		(1) Moving pointer
		(2) Moving scale
.25	.9965	b. Qualitative reading and checking (Determine whether
.25	.9975	indication is within a certain range.)
0	.9999	(1) Moving scale
		(2) Moving pointer
		(3) Either moving pointer or moving scale, if color coded.
0	.9990	3. Pointer style
1.40	.9987	a. Conventional, horizontal bar, 0 at base
		b. Triangle or vertical bar at base (Pointer base = short
		end of pointer.)
3.50	.9900	4. Parallax (Distance the pointer is from the scale face,
		resulting in misreading when viewed from an angle.) If
		parallax is sufficient to result in an error of one gradua-
		tion mark (for quantitative read), these data apply.

CIRCULAR  
SCALES

CIRCULAR SCALES (cont.)

Time added Reliability

5. Interval spacing (Physical distance between marks)
  - a. Less than 1/20 inch .9975
  - b. More than 1/20-1/4 inch .9986
  - c. More than 1/4-2 inch .9996
6. Number of graduation marks per unit of required resolution.  
 (The assessment of this parameter involves two simple steps:
  1. Define required resolution, e.g., must read to 5°.
  2. Determine number of graduation marks used for each five degrees represented on the scale.

A graduation mark for each degree (5:1) would be inappropriate, since the unit of required resolution is five degrees. On the other hand, the presence of one graduation mark for every 20° (1:4) also would be inappropriate, since a high degree of interpolation would be necessary in order to read to the required resolution.

It should be noted that the determination of the units of required reading resolution, while absolutely necessary for assessment of the parameter discussed here, is not, in itself, a parameter requiring evaluation.)

0

n nnn

# CIRCULAR SERIES (cont.)

Time added	Reliability	
		7. Proportion of graduation marks numbered
0	.9999	a. 1:1
.50	.9991	b. 1:5
2.00	.9980	c. 1:10
		8. Number of units represented
0	.9996	a. 50-100
.50	.9984	b. 200
1.50	.9962	c. 400
2.50	.9952	d. 600
		9. Scale brightness
2.50	.9965	a. Imperceptible from normal position, must move closer.
1.75	.9955	b. Minimally perceptible from normal position.
0	.9995	c. Easily perceptible from normal position.
		10. Alignment position of pointer (Position assumed by pointer when condition is neutral or normal.)
		a. All dials uniform (identical markings)
.75	.9985	(1) 3 o'clock
.35	.9992	(2) 6 or 12 o'clock
0	.9994	(3) 9 o'clock
		b. Mixed dials (dissimilar markings)
.43	.9990	(1) 3 o'clock
.35	.9985	(2) 9 or 12 o'clock

# CIRCULAR SCALES (cont.)

Time added	Reliability	
		11. Number of scales and arrangement
0	.9999	a. 1 or 2 x 1
1.10	.9997	b. 2 x 2, 2 x 4, 4 x 4
3.85	.9990	c. 4 x 10, 6 x 4
5.10	.9975	d. 8 x 4, 9 x 5
		12. Scale increase
.55	.9996	a. Right to left
0	.9999	b. Left to right
		13. Exposure (viewing) time
0	.9997	a. Indefinite
.20	.9996	b. .08-.15 sec.
.06	.9966	c. .30-.70 sec.
.04	.9977	d. 1.0-1.40 sec.

# COUNTERS

BASE TIME = .50

Time added Reliability

.75	.9990	1. Size (length)
0	.9998	a. 1"
.10	.9995	b. 1-2"
		c. 3" and up
		2. Number of drums (or digits)
0	.9997	a. 1-3
.25	.9993	b. 4-5
.75	.9985	c. 7 and up
		3. Style
.10	.9995	a. Continuously rotating
0	.9997	b. Unit jumps
		4. Use
0	.9999	a. Quantitative read
1.75	.9990	b. Qualitative read
		5. Numeral legibility
0	.9999	a. Clear and concise
.20	.9994	b. Potentially ambiguous

COUNTERS

# COUNTERS (cont.)

Time added      Reliability

6. Exposure (viewing) time
  - a. Indefinite .3999
  - b. .08-.15 sec. .9996
  - c. .30-.75 .9996
  - d. 1.0 and up .9999
7. Recession (Extent to which counter numerals are set back in panel)
  - a. Numerals can readily be read from normal operating position. .9999
  - b. Requires movement of operator's head to read numerals. .9996
  - c. Operator must shift entire body to read numerals. 1.00

**LABELING**  
(Includes any labeling serving as the step input.)

**BASE TIME = .20**

<b>Time added</b>	<b>Reliability</b>	
		<b>1. Span</b>

BASE TIME = .25

# LIGHTS

Time added Reliability

1. Size (diameter)		
a. Less than 1/4"	.9995	
b. 1/4-1/2"	.9997	
c. 1/2-1"	.9999	
2. Brightness		
a. Indicator		
(1) 10 x background	.9999	0
(2) 2 x background	.9997	0
(3) Less than 2 x background	.9995	.20
b. Caution and warning		
(1) 10 x indicator lights	.9999	0
(2) 2 x indicator lights	.9998	.20
(3) Less than 2 x indicator lights	.9985	1.20
3. Caution lights should be red or amber, warning lights should be red. If not, these scores should be applied.	.9915	1.50
4. Number of lights in visual field (lights ON)		
a. 1-2	.9998	0
b. 3-4	.9975	1.20
c. 5-7	.9952	2.40
d. 8-10	.9946	3.50

# LIGHTS (cont.)

Time added	Reliability	5. Presentation
0	.9998	a. Intermittent (blinking)
.20	.9996	b. Continuous illumination

# LINEAR SCALES

BASE TIME = 1.00

Time added      Reliability

1.05	.9997	1. Size (length)
0	.9998	a. 3"
.15	.9996	b. 6"
		c. 9"
		2. Scale style
.90	.9979	a. Quantitative reading (Determine a specific value.)
.90	.9970	(1) Moving pointer
		(2) Moving scale
		b. Qualitative reading or checking (Determine whether
		Indication is within a certain range.)
.30	.9969	(1) Moving scale
.15	.9976	(2) Moving pointer
0	.9999	(3) Either moving pointer or moving scale, if color coded

# LINEAR SCALES (cont.)

Time added Reliability

3. Scale layout (Direction scale runs through its length)
  - a. Horizontal
 

.9998
  - b. Vertical
 

.9995
4. Interval spacing (Distance between graduation marks)
  - a. 1/10" or less
 

.9975
  - b. 1/10-1/4"
 

.9992
  - c. 1/4" or more
 

.9982
5. Parallax (Distance the pointer is from the scale face, resulting in misreading when viewed from an angle. If parallax is enough to enable an error of one graduation mark, these data apply. Not relevant to qualitative read.

Time added      Reliability

LINEAR SCALES (cont.)

6. Number of graduation marks per unit of required resolution.  
(The assessment of this parameter involves two simple steps:
1. Define required resolution. e.g., must read to  $5^{\circ}$ .
  2. Determine number of graduation marks used for each five degrees represented on the scale.

A graduation mark for each degree (5:1) would be inappropriate, since the unit of required resolution is five degrees. On the other hand, the presence of one graduation mark for every  $20^{\circ}$  (1:4) also would be inappropriate, since a high degree of interpolation would be necessary in order to read to the required resolution.

It should be noted that the determination of the units of required reading resolution, while absolutely necessary for assessment of the parameter discussed here, is not, in itself, a parameter requiring evaluation.)

- a. Every 1 or 2
- b. Every 5
- c. Every 10

0  
1.13  
1.88

# LINEAR SCALES (cont.)

Time added	Reliability	7. Number of units represented (Number of units of required resolution represented on the scale.)
0	.9998	a. 50-100
.55	.9988	b. 200
1.45	.9968	c. 400
0	.9998	8. Scale increase
.55	.9992	a. Left to right (or bottom to top)
		b. Right to left (top to bottom)
0	.9999	9. Proportion of graduation marks numbered
.45	.9995	a. 1:1 or 1:2
1.60	.9985	b. 1:5
		c. 1:10
.24	.9952	10. Exposure (viewing) time
.03	.9983	a. .12 sec.
.02	.9996	b. .30-.36 sec.
	.9999	c. 1.00 sec.
		d. Indefinite
2.45	.9975	11. Scale illumination
1.20	.9962	a. Imperceptible from normal position, must move closer
0	.9999	b. Minimally perceptible from normal position
		c. Easily perceptible from normal position

# NON-SPEECH

BASE TIME = .23

Time added Reliability

.77	.9950	1. Intensity and tone
.47	.9985	a. Would not penetrate ambient noise level
0	.9999	b. Would probably penetrate ambient noise level
		c. Would obviously penetrate ambient noise level
.15	.9965	2. Duration
.08	.9968	a. .5 sec. or less
0	.9997	b. 1.0 sec.
.05	.9995	c. Intermittent
		d. Continuous
0	.9984	3. Interval between signals (in seconds)
.28	.9996	a. .04
.32	.9999	b. .08
		c. 1.2 and up

BASE TIME = 3.80

# SCOPES

Time added Reliability

.50	.9980	1. Number of range marks
0	.9997	a. 1 or 2
0	.9999	b. 3-5
.30	.9990	c. 6-10
.80	.9983	d. 10-20
		e. 20 and up
		(If every 5th mark is not heavier, add .3 to time and subtract .0005 from reliability.)
2.00	.9975	2. Bearing indication method
1.00	.9990	a. Estimate (no aid)
.50	.9995	b. Use overlay
0	.9999	c. Use cursor ("Track" target with cursor controlled by knob. At "lock on", read bearing from dial or counter.)
		d. Use pantograph (Manually place crosshairs of pantograph over target and read bearing from a counter.)
0	.9997	3. Third coordinate coding method
		a. Color, numerals, and letters; geometric figures, stereo depth
.75	.9985	b. Area, visual number, length, angular orientation
1.50	.9965	c. Brightness, flash rate

## SCOPES

# SCOPES (cont.)

Time added	Reliability	
3.50	.9956	4. Rate of target presentation
3.00	.9971	a. 10 per hour
2.00	.9986	b. 20 per hour
1.00	.9990	c. 30 per hour
0	.9970	d. 40 per hour
		e. 1500 per hour
2.00	.9990	5. Scope size (diameter)
.75	.9999	a. 3"
0	.9999	b. 4"
		c. 5-7" and up
0	.9999	6. Visual angle (from operator to scope face)
.70	.9995	a. 0-45°
		b. 45-80°
.75	.9990	7. Target exposure time
.30	.9995	a. 3 sec.
0	.9999	b. 5 sec.
		c. Over 5 sec.
0	.9999	8. Target velocity (inches per second)
2.00	.9992	a. .75
3.00	.9985	b. 1.75
		c. 3.25

# SEMI-CIRCULAR SCALE (Includes open-window scales)

BASE TIME = .50

Time added    Reliability

1.15	.9996	1. Size (radius)
.05	.9997	a. 1/2-3/4"
0	.9993	b. 3/4-1"
		c. 1-2"
1.10	.9980	2. Scale style
1.10	.9981	a. Quantitative information (Determine a specific value)
		(1) Moving pointer
		(2) Moving scale
.10	.9982	b. Qualitative information and checking (Determine whether
.10	.9975	indication is within a certain range.)
0	.9999	(1) Moving pointer
		(2) Moving scale
		(3) With color or zone code
3.50	.9900	3. Parallax (Distance the pointer is from the scale face.
		resulting in untrue reading when viewed from an angle.)
		If parallax is sufficient to result in error of one
		graduation mark, these data apply. Not relevant to
		qualitative read.

# SEMI-CIRCULAR SCALE (cont.)

Time added Reliability

4. Scale arc length (number of degrees included by scope face.)
  - a. 25° .9937
  - b. 50-100° .9950
  - c. 200° .9964
5. Scale interval spacing (Distance between graduation marks.)
  - a. Less than 1/20" .9965
  - b. 1/20-less than 1/10" .9933
  - c. 1/10-less than 1/2" .9955
  - d. 1/2-less than 1" .9969
  - e. 1-less than 2" .9962
6. Scale brightness
  - a. Imperceptible from normal position, must move closer. .9971
  - b. Minimally perceptible from normal position. .9960
  - c. Easily perceptible from normal position. .9998
7. Number of graduation marks per unit of required resolution  
(The assessment of this parameter involves two simple steps:
  1. Define required resolution, e.g., must read to 5°.
  2. Determine number of graduation marks used for each five degrees represented on the scale.)

A graduation mark for each degree (5:1) would be inappropriate, since the unit of required resolution is five degrees. On the other hand, the presence of one graduation mark for each five degrees (1:5) would be appropriate.

# SEMI-CIRCULAR SCALE (cont.)

Time added Reliability

mark for every 20° (1:4) also would be inappropriate, since a high degree of interpolation would be necessary in order to read to the required resolution.

It should be noted that the determination of the units of required reading resolution, while absolutely necessary for assessment of the parameter discussed here, is not, in itself, a parameter requiring evaluation.)

- |      |       |  |
|------|-------|--|
| 0    | .9996 | a. Every 1 or 2 units                      |
| 1.45 | .9992 | b. Every 5th unit                          |
| 1.75 | .9985 | c. Every 10th unit                         |
|      |       | 8. Proportion of graduation marks numbered |
| 0    | .9999 | a. 1:1 or 1:2                              |

# SPEECH

BASE TIME = 2.02

Time added	Reliability	
0	.9995	1. Intensity and tone
.75	.9990	a. Would obviously penetrate ambient noise level
1.50	.9950	b. Would probably penetrate ambient noise level
		c. Would not penetrate ambient noise level
		2. Ambiguity (Reflects the way in which a statement is phrased: the meaning should be clear to be unambiguous.)
1.45	.9950	a. Potentially ambiguous
0	.9997	b. Obviously unambiguous
		3. Repetition (Refers to repetition of the entire speech input.)
0	.9991	a. None
.75	.9997	b. One

BASE TIME = .25

Time added      Reliability

IDENTIFICATION/RECOGNITION

1. Discrimination (Refers, in general, to the separation of one thing (stimulus event) from others.)
  - a. Heterogeneous (Refers to discriminations made among relatively unique or unlike events.)
  - b. Homogeneous (Refers to discriminations made among relatively similar events.)
2. Recall (Refers to the retrieval of information from memory. The level of recall, as viewed here, is assumed to be primarily dependent upon the opportunity for learning the material in memory.)
  - a. Formal (Refers to recall of information for which there has been an opportunity to learn and practice sufficient to attain a high degree of proficiency. This assumes that contingent operations are either unlikely or well learned.)
  - b. Informal (Refers to recall of information for which there has been inadequate opportunity to learn or practice. The major assumption here is concerned with operating contingencies. That is, when operations depend upon uncontrollable external events (enemy action), the opportunity for learning is restricted.)

0                      .9998

3.42                      .9987

0                      .9997

2.57                      .9992

# IDENTIFICATION/RECOGNITION (cont.)

Time added Reliability

3. Compare (Refers, in general, to the process of examining for the purpose of discerning likenesses or differences. The concern here is with the process, and not that which is compared.)
  - a. Discrete (Refers to the process of comparing specific attributes or dimensions of information at a given moment in time.)

0 .9996
  - b. Continuous (Refers to the process of successive comparisons of attributes or dimensions of information through time.)

3.55 .9989

## MANIPULATION

BASE TIME = .75

Time added	Reliability	
0	.9997	1. Numerical
		a. Simple (Refers to numerical operations that are virtually automatic.)
5.00	.9991	b. Compound (Refers to numerical operations that are either multiples of the above, or that require some modification of known operations.)
10.72	.9972	c. Complex (Refers to the development of new associations or relationships to fit novel situations.)
0	.9998	2. Non-numerical
		a. Simple (Refers to the manipulation of information in a manner virtually automatic.)
15.00	.9987	b. Compound (Refers to manipulations involving some modification of either the information or alternatives. This would include multiples of simple manipulations.)
35.00	.9968	c. Complex (Refers to manipulations where the end result is known, but its achievement is left to the ingenuity and expertise of the operator.)

# CABLE CONNECTIONS

BASE TIME = .80

Time added Reliability

0	.9997	1. Required force
.75	.9992	a. Light (5 lbs. or less)
		b. Heavy (over 5 lbs.)
0	.9987	2. Locking method
0	.9990	a. None
.20	.9992	b. Automatic
.40	.9995	c. Less than 1/4 turn
3.20	.9997	d. More than 1/4 to less than 1 turn
2.75	.9999	e. Clamp
6.50	.9999	f. Pin
		g. Threaded
0	.9998	3. Number of probes within the connection
		a. None, one or two, or keyed
.40	.9992	b. Three or four
.85	.9988	(1) No particular placement required
		(2) Specific placement of probes required
.65	.9990	c. Five or more
1.40	.9982	(1) No particular placement required
		(2) Specific placement of probes required

# CABLE CONNECTIONS (cont.)

Time added      Reliability

4. Use of tool(s) (Time and error to be considered for each tool used; above scores assume no tools.)
  - a. Standard tool (wrench, screwdriver, etc.)
  - b. Special tool

.85  
0

.9990  
.9993

## CRANKS

The following parameters and data apply for single control operation. Many target acquisition (or tracking) applications require the simultaneous use of two controls. In these cases, the total time will be less than twice the sum of the individual times, but less than the time required for operation of a single control. The estimate for combined reliability should be even less than the product of the two individual reliabilities, but, of course, more than the independent.

Consideration of the factors listed below and the nature of the task as a whole, should suggest the magnitude of the time and reliability.

BASE TIME = 4.31

Time added	Reliability	
		1. Diameter
.73	.9970	a. 3"
.20	.9990	b. 4"
0	.9975	c. 8"
.28	.9985	d. 12"
		2. Control force
0	.9985	a. Less than 5 lbs.
1.00	.9972	b. 5-10 lbs.
		3. Control/display movement relationship (direction of movement)
0	.9992	a. Direct
2.30	.9975	b. Reverse

		CRANKS (cont.)	
Time added	Reliability		
0	.9980	4. Time delay (Time lag between turn of control and movement of display.)	
1.50	.9965	a. Less than 1.5 sec.	
		b. More than 2.0 sec.	
		5. Control/display movement ratio (Number of complete revolutions per inch of cursor movement.)	
0	.9975	a. 1:1	
.35	.9990	b. 2:1	
.50	.9992	c. 3:1	
1.00	.9999	6. Use of lock mechanism on control	
0	.9989	a. Present	
		b. Absent	
		7. Clarity of control indications (Labeling, meter scales, indicator lights, etc.)	
.10	.3999	a. At least two indications of control positioning	
0	.9996	b. A single, but clear and concise indication of control positioning	
.50	.9991	c. A potentially ambiguous indication of control positioning	

# DISCONNECTING CABLES

BASE TIME = .50

Time added      Reliability

1. Force		
0	.9999	a. Light (5 lbs. or less)
.50	.9997	b. Heavy (over 5 lbs.)
2. Locking method		
0	.9999	a. None
.20	.9999	b. Automatic
.30	.9998	c. Less than 1/4 turn
.50	.9999	d. More than 1/4 turn
4.20	.9995	e. Clamp
2.75	.9997	f. Pin
6.15	.9999	g. Threaded
3. Use of tool(s) (Time and error to be considered for each tool used; above scores assume no tools.)		
3.20	.9996	a. Standard tool (wrench, screwdriver, etc.)
2.35	.9998	b. Special tool
